                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         28;

Submitted (18-JUN-2004) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On Feb 27, 2004 this sequence version replaced gi:31880232. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washingron.edu/RM/RepeatWasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Center: Whitehead Institute/MIT Center for Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63747: contig of 63747 bp in length 63847: gap of 100 bp 73892: gap of 100 bp 154450: contig of 80458 bp in length 15450: contig of 80458 bp in length 15450: contig of 80458 bp in length 167808: contig of 13258 bp in length 167908: gap of 100 bp 176711: contig of 8803 bp in length 176711: contig of 8803 bp in length 233500: contig of 5689 bp in length 233500: gap of 100 bp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of callular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restrenosis, cardiac hypertrophy, immune disorders and inflammation. This KID enzyme of the invention.

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for medulators of a motor protein which has microtubule stimulated Arpase activity, a method of testing for Arpase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target compose, and included Arpase activity of a target protein, modulators of the target concein, and methods of treating cellular proliferation disorders such as another to protein, and methods of treating cellular proliferation disorders such as and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders and inflammation, for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune disorders and inflammation, for treating autoimmune consoluted with KID and for inhibiting KID and for treating autoimmune disorders and inflammation, for treating autoimmune consoluted with KID and for inhibiting KID and for treating autoimmune disorders and inflammation, for treating autoimmune consoluted after medical procedures including surgery and anglobatry. This sequence represents DNA encoding a human microtubule concodes the protein featured as SEQ ID NO:4, but this does not consolute the case.
                                                                                                                                                                                                                                                                                                                                                                                           New isolated microtubule motor protein, useful for screening modulators for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The present invention describes a method for modulating the expression of a thanatos (death)-associated protein (THAP) responsive gene. The method comprises modulating the interaction of a THAP-family polypeptide or its biological fragment with a nucleic acid, and so enhancing or repressing the expression of the THAP responsive gene. Also described: (1) a method of of modulating the expression of a gene responsive to a THAP/fohenokine complex; (2) a pharmaceutical composition comprising a THAP responsive element in a pharmaceutical carrier; (3) a transcription factor decoy consisting essentially of a THAP responsive element; (4) a call comprising a transcription factor decoy described above; (5) methods of modulating the interaction between a nucleic acid and a THAP-family polypeptide or its biological fragment, or a nucleic acid and a THAP-family polypeptide or its biological fragment, or a nucleic acid and a call comprising a viral vector which comprises a promoter operably linked fragment; (7) a method of constructing a cell which expresses a fragment; (7) a method of constructing a cell which expresses a combinant THAP-family polypeptide or its biological fragment; (8) a method of ameliorating symptoms associated with a condition mediated by a THAP/chemokine complex Example 47; SEQ ID NO 426; 612pp; English.

```
at a THAP responsive element or that modulates the transport of a chemokine into the nucleus; (10) methods for reducing the symptoms associated with a condition selected from excessive or insufficient angiogenesis, inflammation, metastasis of a cancerous tissue, excessive or insufficient apoptosis, cardiovascular disease and neurodegenerative diseases; symptoms associated with a condition resulting from the activity of a chemokine or a THAP-family polypeptide in an individual; or symptoms associated with transcriptional repression or activation comprising a THAP-family polypeptide in an individual; (11) a vector comprising the vector described above or that expresses a THAP-family polypeptide in an individual; (12) a vector comprising the vector described above or that expresses a THAP-family polypeptide or its biological fragment; (13) an in vitro transcription reaction comprising a nucleic acid comprising a THAP responsive promoter; (13) an in vitro transcription reaction comprising an antaleic acid comprising a THAP responsive promoter; (13) an in vitro transcription cannocitic that does not bind to a chemokine. The pharmaceutical composition has antiangiogenic, antiinflammatory, cardiovascular, composition has antiangiogenic, antiinflammatory, cardiovascular, composition has antiangiogenic, antiinflammatory, cardiovascular, composition has antiangiogenic, antiinflammatory, cardiovascular, composition the expression of a THAP responsive gene. Modulation us useful confinent and antiqued and an expensive or insufficient and enginesis, inflammation, metastasis of a cancerous tissue, excessive or insufficient and enginesis, inflammation, metastasis of a cancerous expenses; inflammation, metastasis of a cancerous expenses; inflammation, metastasis of a cancerous expenses; inflammation, metastasis of a cancerous expenses; inflammation, metastasis of a cancerous expenses; inflammation, metastasis of a cancerous expenses; in the expression of a THAP exponsive promoterial vector and promoterial vector and promoterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a complement of (a); (c) hybridizes under stringent conditions to (a) and conditions to (a) and conditions to (a) and conditions to (b) and conditions to (a) and conditions of a condition of a condition of an except that it lacks one or more, but not all, of an N-terminal domain, a coiled-coil structure region, a spacer region and a C-terminal domain, a coiled-coil structure region, a spacer region and a C-terminal tail; or (e) is a complement of (d). The nucleic acid molecules, polypeptides, methods and substance are useful for treating cancers, immune-related diseases or disorders, cardiovascular disease, brain or neuronal-associated diseases, and metabolic disorders. The disorders are preferably cancers of the tissues or of hematopoietic origin, diseases of the central or peripheral nervous system, Alzheimer's disease, pair, viral infections infections caused by fund; ocular diseases, methodic anseed by fund; ocular diseases, methodic anseed by fund; ocular diseases, methodic anseed by fund; ocular diseases, methodic alsorders, disorders, effection, This sequence corresponds to the DNA encoding one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             65

1468 1288 1385 1408 1444 1504 This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that DNA encoding the human kinesin-like DNA binding protein (KID) (SeqID 7) human; gene; ds; motor domain; kinesin-like DNA binding protein; KID; cytostatic; cardiant; immunomodulator; antiinflammatory; gene therapy; cancer; hyperplasia; restenosis; cellular proliferation disorder; cardiac hypertrophy; immune disorder; inflammation.                                                                                                                                                                                                                                                                                                                                                                                                                                             셤
                                                                                                                                                                                                                                                                                                                                                                                                                              ठे
domains, such that the target protein directly or indirectly produces ADP cor phosphate. Furthermore, this activity of an be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a finesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunoamodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, trestenosis, cardiac hypertrophy, immune disorders and inflammation. This polynucleoride sequence is human KID DNA (SeqID 7) encoding a full length KID enzyme of the invention.

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or completed or activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders as and inflammation, for treating disorders associated with kinesin-like DNA creening for modulators of motor proteins useful for treating cellular complication disorders and as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating autoimmune completed with KID and for inhibiting KID and for treating autoimmune disorders and inflammation, for treating autoimmune disease, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and angioplasisy. This sequence represents DNA encoding a human microtubule completed in the invention.
                                                                                                                                                                                                                                                                                       New isolated microtubule motor protein, useful for screening modulators for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; SEQ ID NO 7; 26pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          APPISSES to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, undonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynucleotide sequence is human KID DNA (SeqID 1) encoding a full length KID enzyme of the invention.
                                                                                                                                                                                                                                                                                                                                                   120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA binding protein (KID) (SeqID 1)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated Arpase activity, a method of testing for Arpase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or protein or act as a modulator of the binding characteristics or concer, hyperplasias, restenosis, cardiac hypertrephy, immune disorders and inflammation, for treating cellular proliferation disorders as and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders

Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human microtubule motor proteins and the mucleic acids encoding them. The invention also relates to a method of screening condulators of a motor protein which has microtubule stimulated ATPase crivity, a method of testing for ATPase activity of microtubule motor crivity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating callular screening for modulators of motor proteins useful for treating disorders cancer, hypertrophy, immune disorders and inflammation, for treating disorders cancer, hypertrophy, immune disorders and inflammation, for treating autoimmune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                음
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated polynucleotide comprising a sequence selected from 183 human DNA sequences (appearing as ABK70130-ABK70312),

or their fragments, homologues, variants or complements and their encoded polypeptides. Also included are an expression vector comprising the collynucleotide operably linked to an expression vector of; an isolated collynucleotide operably linked to an expression vector of; an isolated collynucleotide operably linked to an expression vector of; an isolated or transfected with an expression vector of; an isolated or altipoptide; a method for detecting the presence of a cancer in a patient of a fusion protein comprising at least the polypeptide; an oblypeptide; an exthod for etiminating and/or expanding T cells of specific for tumour protein; an isolated T cell population comprising T colls specific for tumour protein; an isolated T cell population comprising a first component selected from the polymucleotides, proteins, and a second component selected from the polymucleotides, proteins, and a second component selected from the polymucleotides, proteins, and a second proteins. T cell populations and antigen presenting cells expressing the polymorleotides, proteins, and a patient by administering the composition and diagnostic kits comprising at least one of the oligonucleotide of, or an antibody and a contract in a patient by administering the presenting to proper presenting of a reporter group. The polypeptides, and a reporter group. The polypeptides, and a reporter group. The polypeptides of a reporter group. The polypeptides of a reporter group. The polypeptides of a reporter group. The polypeptides of a reporter group. The polypeptides of a reporter group. The polypeptides of a reporter group. The polypeptides of a reporter group. The polypeptides of a reporter group. The polypeptides of a reporter group of a reporter group of a reporter group.

The polypeptides and polymocleotides are useful as vaccines for the treatment or prevention of lung cancer, and for diagnosis and monitoring of such cancer. The polymucleotide, polypeptide and antigen presenting cells can be used to simulate or expand T cells specific for a tumocrous protein. The polymucleotides may be used as probes or primers for nucleic acid hybridisation, and in the preparation of ribozyme molecules for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New tumor lung proteins and nucleic acids encoding the proteins, useful as vaccines and for treating, preventing, diagnosing or monitoring lung

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1206
                                                                                                                                                                                                                           The invention relates to new polynucleotides and polypeptides, useful for diagnosis and treatment of breast, lung and colon cancer. The sequences can be used in detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous. They can also be used to inhibit tumour growth by modulating expression of a gene product. AAS36943-AAS39338 represent novel human diagnostic and therapeutic coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (BST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antibodies specific for it. The present sequence is one of the 38043 isolated CDNA/RST sequences. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cDNA libraries, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        260 CAAATACCAGITIGAIGCCIICIAIGGGGAGAGGAGIACICAGCAGGACAICIAIGCAGG

smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at

Sequence 531 BP; 117 A; 153 C; 149 G; 112 T; 0 U; 0 Other;

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide captression, comprising any of the 27,400 fully defined nucleotide expression, acids of any of the 6888 amino acid sequences conciding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that controlled acid sequences controlled in the specification. The probe is a single exon probe that the specification. The probe is a single expressed in human cells or tissues. Also included are a spatially-captressed in human cells or tissues. Also included are a spatially-captressed in human cells or amplifiable from the plurality), a single controlled advove, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a wector comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe cited above, an ORF-encoded peptide comprising at least 8 contiguous amino acids of any of the above-mentioned amino acids of any of the above-mentioned amino acids of selling and/or licensing single exon probes or microarrays to solated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to contage medium which contains a database having a plurality of records (each record including data on the expression of a single exon probe cited above. The probe, methods may be used as tools for surveying cited above. The probe, methods may be used as tools for surveying cited above. The probes may be used as tools for surveying cited above. The probes may be used as tools for surveying cited above. The probes are used in identifying and characterising gross alternative splicing events, in detecting and characterising gross alternative splicing events, in detecting and characterising specific.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to h
score greater than or equal to the score of the result bein
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /cgn2_6/ptodata/1/ina/5A_COMB.seq:*
